# Global Change in Mediterranean Regions: Potential Impact of Climate Drift and Land Use on Soil Erosion and Land Degradation

### Message from the Guest Editors

Mediterranean-climate regions are located across various regions of the globe and account for about 2% of the Earth's surface. These regions are typically characterized by a unique climatic regime with wet winters and warm, dry summers. Presenting an extensive biodiversity, they are internationally recognized as one of the most sensitive regions to the impacts of climate change and anthropic actions. In such contexts, soil erosion offers a critical perspective of future effects as it is associated with a general degradation of the environment and depletion of soil nutrients due to the anthropic impacts of agricultural exploitation. In many Mediterranean areas, the interactions between climate and human activities have already led to short- and mid-term unsustainability. Although total rainfall is generally decreasing in these regions, the intensity of extreme events is expected to increase, leading to an alarming potential for climate change to impact soil erosion and land degradation. Furthermore, many factors related to land use contribute to the aggravation of the phenomenon, such as changes in land use and erosive crops increasing soil loss.

## About the Journal

### Message from the Editor-in-Chief

*Land* is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
