

Special Issue

Application of Spectroscopy and Other Instrumental Methods for Soil

Message from the Guest Editor

Protecting soil and finding means to fight against soil degradation has to be among the most important goals of agricultural and environmental sciences all over the world. Improving our knowledge about potential impacts which could affect the natural soil process and which could be the reason behind the decline of soil fertility and productivity was and is the responsibility of researchers from different disciplines. Ongoing development of modern instrumental techniques allows to open new trends of soil studies, and also the transformations occurring under climatic changes, environment pollution or other human actions. The special issue is dedicated for manuscript which develop the application of spectroscopies in soil studies as an alternative to traditional laboratory analysis. As well as the anthropogenic impact on soils, spectroscopic characteristics are also an interesting issue. Apart from studies of soil itself, an important part of investigations concerns soil amendments and fertilizers such as compost and biochar.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
