

Special Issue

Sustainable Management of Natural Resources in Livestock System

Message from the Guest Editor

Livestock farming systems throughout the world are the lifeblood of millions of people and constitute an important heritage of knowledge and know-how in the exploitation and management of natural resources, which can provide a wealth of information for considering more sustainable forms of natural resource management. This Special Issue aims to synthesize knowledge on traditional and innovative forms of natural resource management within livestock systems from a resilience and sustainability perspective. In particular, contributions are expected on the following topics: • People-livestock-natural resource relationships from a sustainability perspective

- Experiences of successful technical itineraries for the management of natural resources through livestock farming
- the provision of ecosystem services provided by livestock farming
- the emergence of new risks related to livestock farming in the context of current global changes
- Cross reflections on the places and roles of livestock systems in shaping sustainable food systems and the implementation of environmental transitions in natural resource management.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief
