

Special Issue

Tillage Systems Impact Soil Structure and Cover Crop

Message from the Guest Editors

The Special Issue aims to assess the effects of tillage systems on the soil structure, cover crops, and/or soil loss under extensive agricultural management considering or not considering climate change. This Special Issue closely encompasses the aims and scope of the *Land* journal (MDPI), involving the soil–sediment–water systems, land management, and land–climate interactions.

- tillage systems
- soil structure
- soil quality
- crop rotation
- soil erosion
- climate change
- soil health
- cover crops
- land use and land cover change

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
