Special Issue

Impacts of COVID-19 on Urban Food Security

Message from the Guest Editors

COVID-19 and its associated health policies have dramatically affected food systems and food security in cities around the world. The pandemic has led to increases in levels of vulnerability and has created complexities within urban food systems by worsening household income and chronic and acute hunger, and disrupting food supply chains, which were widespread issues even prior to the pandemic. COVID-19 has exacerbated these issues by affecting vulnerable households in almost every city, and more specifically, the overcrowded cities of the Global South. As the threat of new variants looms, these impacts are expected to persist for the foreseeable future. Our changing food systems, livelihood strategies, and food security experiences remain areas of concern that require more research.

- Disruptions to income and livelihood vulnerability in cities:
- Food supply chain disruptions;
- Urban household food access, availability, utilization and stability;
- Social relations of inequality and/or difference such as gender, age, race, class and ethnicity;
- Urban food system governance and resilience;
- Rural-to-urban, urban-to-urban, transboundary, and multiscalar linkages.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
