Message from the Guest Editor

The aim of this Special Issue is to further explore this growing area of research by discussing a range of constructions in Romance in which the way syntactic form relates to semantic interpretation plays a crucial role. Contributions are expected to be formulated in terms of current generative theory or in terms of an alternative framework that allows for a clear comparison between the two. Primary empirical support should be drawn from at least one Romance language, although further argumentation based on non-Romance languages is welcome.
