### Message from the Guest Editors

Dear Colleagues,

Gastrointestinal (GI) diseases refer to a wide range of conditions that affect the digestive system, including the esophagus, stomach, small intestine, colon, and rectum. The molecular mechanisms underlying these diseases vary, but they usually involve genetic factors, abnormal immune responses, infections, and changes in the gut microbiome.

This Special Issue welcomes submissions of original research articles and reviews on novel studies performed in Gastrointestinal Diseases. Specific subject areas of interest include but are not limited to:

- Molecular mechanisms of the pathophysiology of IBD, IBS, gastrointestinal cancer, FA and EoE.
- Current clinical practices and new perspectives on GI disease treatment.
- Novel desensitization strategies in food allergy.
- Specific mechanisms of allergen immunotherapy (cellular and molecular).
- Research in novel brain-gut axis mechanisms involving GI diseases.
