Message from the Guest Editor

Dear Colleagues,

Motor deficits refer specifically to the effect of the damage caused to motor skills or movement provoked by many neurological disorders and conditions. The symptoms of neurological disorders include a broad spectrum of motor problems, from the complete paralysis of a large part of the body, to a slight weakness in the affected muscles. Such problems affect an individual's functioning, result in disabilities or a limitation on activities, and restrict their social activities. The aim managing motor deficits is to improve the motor skills of affected individuals, eventually cure their symptoms, and ultimately bring individuals back to their normal life. However, due to limited knowledge regarding the mechanisms that underlie these symptoms, effective treatments are lacking. Due to the complexity of injuries caused to different parts of the nervous system, plus the severity of these injuries, age, and the injury type, it is a challenge to make a correct diagnosis and thus a correct treatment regimen.

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
