### Message from the Guest Editors

Dear Colleagues,

Alzheimer's disease is a leading cause of death among various CNS disorders. Reports have suggested the multifactorial nature of the disease. Thus, diverse therapeutic modalities have been explored for the treatment of diseases. Present Special Issues aim to publish research and review articles focused on small molecules, herbal drugs, biologics, and gene-editing technologies. Additionally, the review and research articles dealing with clustered regularly interspaced short palindromic repeats (CRISPR), targeted formulations and pathophysiology of the disease are also encouraged.

The Special Issue is seeking publications about established therapeutic modalities and recent interventions used to treat the disease.

Prof. Dr. Devendra Kumar
