Message from the Guest Editor

Over the years, the need for organic niche markets have seen an exponential growth by health-conscious consumers around the world, but the supply of organically produced poultry products does not always meet the demand in many regions. Moreover, the cost of producing such organic products is currently a major problem due to the ever-rising feed costs. Thus, this Special Issue is designed to publish high-quality and original research on the use of natural additives or nutraceuticals with growth-stimulating, health-promoting, and antimicrobial and antioxidant bioactivities that can deliver organic and sustainable poultry production systems. Original research articles, review papers, short communications and research reports are most welcomed.
