Neuronal Activity and Signalling: Evidence from Electrophysiological Research

Message from the Guest Editors

The biophysical and electrical properties of neural membranes could be used to investigate and modulate the basic mechanisms of the nervous system, ultimately influencing broader physiological and pathological processes. Among them, neuronal excitability is a basic feature of the nervous system, originating from the chemical and electrical gradients of its ionic milieu across the cellular membrane. Investigating the mechanisms that maintain ionic homeostasis and cellular excitability, together with the possible synaptic targets involved, adds invaluable knowledge to the functioning of neural transmission and signalling. The bench-to-bedside potential of the electrophysiological approach unveils diverse research opportunities via extracellular and intracellular recordings that encompass multiple scales of measurement for neural codes and networks. Whole-cell patch-clamp, two-electrode voltage-clamp, single-unit and multi-unit local field recordings, quantitative electroencephalography (EEG), and non-invasive brain stimulation (NIBS) are some of the wider techniques applied in the field that could allow hierarchy and integration, serving as a hub for the neural sciences.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
