

Special Issue

Gastrointestinal Diseases: Molecular Mechanism, Clinical Research, and Therapeutics

Message from the Guest Editors

Gastrointestinal (GI) diseases refer to a wide range of conditions that affect the digestive system, including the esophagus, stomach, small intestine, colon, and rectum. The molecular mechanisms underlying these diseases vary, but they usually involve genetic factors, abnormal immune responses, infections, and changes in the gut microbiome. This Special Issue welcomes submissions of original research articles and reviews on novel studies performed in Gastrointestinal Diseases. Specific subject areas of interest include but are not limited to:

- Molecular mechanisms of the pathophysiology of IBD, IBS, gastrointestinal cancer, FA and EoE.
- Current clinical practices and new perspectives on GI disease treatment.
- Novel desensitization strategies in food allergy.
- Specific mechanisms of allergen immunotherapy (cellular and molecular).
- Research in novel brain-gut axis mechanisms involving GI diseases.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
