Molecular Mechanisms in Pain Signaling Pathways

Message from the Guest Editors

The medicinal treatment of chronic pain of various etiologies requires the use of opiates and/or opioids, which evoke adverse side effects at the organismal level and are highly addictive. For this reason, the world is experiencing an opioid crisis, representing one of the worst public health crises in history. When pain as a sensation loses its informational and protective function and becomes chronic, this pathology can be corrected only by drug administration. Regrettably, there are no safe and effective analgesics that can replace opiates in the arsenal of clinical medicine.

A possible approach to help solve this challenging problem is to modulate the functional activity of ion channels encoding the nociceptive information. The desire to specifically eliminate this high-frequency impulse activity component of polymodal nociceptors, leaving the signals of other modalities intact, forces us to look for novel approaches to the creation of fundamentally new, effective, and safe drugs that can replace opiates and opioids in clinical practice.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
