

## Special Issue

# Current Problems and New Horizons in Headache Clinical Practice

### Message from the Guest Editors

Headache is one of the most harmful diseases to healthy life expectancy in the world. Opportunity and economic losses due to headaches are beginning to be recognized. A paradigm shift is occurring as new drugs are being introduced one after another, and headaches, especially migraine, have become a treatable disease. On the other hand, some patients have become headache refugees or suffer from medication-overuse headaches due to a lack of access to appropriate headache care and correct information. This special issue solicits manuscripts on a wide range of headache-related treatment and prevention topics. Particular attention will be paid to papers with content related to new drugs, awareness-raising, and epidemiological studies to expand appropriate headache treatment and other topics that will lead to more people being able to enjoy headache medical care. In addition, papers using the latest technologies, such as artificial intelligence and smartphone applications, are also welcome. We look forward to papers that will help make headache treatment accessible to as many people as possible and that will help bring about social change.

## About the Journal

### Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.
