Research in Medicinal Chemistry

Message from the Guest Editor

Cancer is one of the leading causes of death worldwide. Chemotherapy is one of the commonly used cancer treatments. Several of the chemical entities involved in chemotherapy contain heterocycles, especially azaheterocycle scaffolds. However, despite the wide range of antitumor activities associated with azaheterocycles, still there remains a requirement to identify novel azaheterocycles with improved and selective anticancer activity, which has become an important aim in modern cancer drug discovery.

The advent of new chemical entities, approaches, and treatments has brought new opportunities for anticancer drug discovery. With this Special Issue, we aim to provide an overview of recent advances in the development of azaheterocycles in modern cancer drug discovery to the scientific community from academia and industry.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
