Imaging Research in Liver Neoplasms

Message from the Guest Editor

Liver neoplasms are among the leading causes of death worldwide. As a result, the early detection of primary and secondary liver tumors through diagnostic imaging is essential. Oncologic patients suffering from primary and secondary neoplastic liver disease can benefit from a wide range of treatments, including surgery, chemotherapy, radiation therapy, interventional radiology, and most recently, immunotherapy, and post-treatment diagnostic imaging is crucial for the correct assessment of patients. Artificial intelligence has the potential to significantly increase treatment efficacy and patient survival rates; therefore, its effects on early diagnosis and the prediction of post-treatment recurrence must be taken into account. You are invited to contribute to this Special Issue with your original articles and/or review papers on this topic.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
