

## Special Issue

# Developing Artificial Intelligence for Cancer Diagnosis and Prognosis

### Message from the Guest Editors

Cancer is an aggressive disease, and a significant number of cancer types have a low median survival rate. Accurate and efficient early diagnosis and prognosis prediction are essential to improve patient survival and quality of life. Currently, artificial intelligence (AI), especially machine learning and deep learning, can leverage massive amounts of data for predictive modeling in a wide variety of fields and has increasingly been used to inform complex decision making in clinical cancer research in recent years. Therefore, we invite researchers and clinicians to submit original articles, as well as review articles on the application of AI to cancer diagnosis and prognosis. Potential topics of interest include but are not limited to the following:

- Artificial intelligence in cancer diagnosis, specifically regarding its unprecedented accuracy;
- Artificial intelligence in clinical cancer prognosis prediction, especially in multi-omics analysis or combined analysis of genomic data;
- Application of artificial intelligence in cancer image data.

## About the Journal

### Message from the Editor-in-Chief

*Life* (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
