Special Issue

Anesthesia and Intensive Care: From Training to Experience in the Field

Message from the Guest Editor

The COVID-19 pandemic profoundly impacted the healthcare system, particularly regarding the need for an adequate number of intensive care units and physicians, and determining how surgery activities can be guaranteed when pandemic events arise. This Special Issue aims to report innovations in Anesthesia Intensive Care after the COVID-19 pandemic. Anesthesia intensive care is continuously evolving, and modern technologies have enhanced the quality, efficiency, precision, and safety of the procedures. In this context, machine learning tools and deep learning could play exciting roles, offering further advances in the field. All these aspects underline how anesthesia and intensive care must continue to evolve. Modern instruments, such as simulation labs or devices, could help resident students in their learning path and aid in their autonomy. What is the future for this discipline?

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana
Institute for Research in Biomedicine (IRB Barcelona), The Barcelona Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:
indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, and other databases.

Journal Rank:
JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
