Molecular Therapy for Non-small Cell Lung Cancer

Message from the Guest Editor

The field of lung cancer has seen transformative progress in molecular understanding, particularly in non-small-cell lung cancer (NSCLC). This has led to a shift from a uniform approach to a patient-centric model of care. "Molecular Therapy for Non-Small-Cell Lung Cancer," a Special Issue guest-edited by , aims to compile research articles and reviews on the molecular underpinnings of NSCLC and explore clinically relevant targeted therapies. The issue covers well-established molecular targets like EGFR, ALK, BRAF, ROS1, RET, HER-2, and PD-L1, as well as emerging markers and pathways. The issue also addresses challenges related to acquired resistance, managing side effects, and incorporating molecular therapies into traditional treatment regimens. Interdisciplinary submissions from molecular biology, pathology, pharmacology, and clinical oncology are encouraged to enrich our understanding and provide direction for future research in this dynamic field.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
