Advances in Ubiquitous Connective Tissue Architecture: Fascia, Dynamic movements and Perception in Living Structures

Message from the Guest Editor

The concept of fascia is widely used in therapy, but its anatomical definition often doesn't match observations, especially in living bodies. There are two opposing views: one based on traditional macroscopic anatomy from cadavers, and the other from endoscopic studies of living bodies and insights from other sciences. The first sees the body as separate organs connected by layers of fascia. The second views fascia as a crucial part of the body's structure, forming an interconnected network at all levels. This Special Issue will review both perspectives and link fascia, connective tissue, and the extracellular matrix. Contributions from fields like biochemistry, embryology, thermodynamics, fluid dynamics, quantum physics, and complex systems will also be considered. Researchers are invited to submit original research or reviews to clarify this semantic issue and living matter organization.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
