Nutritional Supplementation, Body Composition and Performance in Athletes

Message from the Guest Editor

Optimal nutrition is critical for health, prevention of disease and optimal performance. High energetic needs could be problematic from the point of view of macronutrients, especially carbohydrate intake.

Regeneration from extreme exercise and the development of maximal sports performance are critical and depend on the nutritional regimen before and after physical exercise and also from general nutrition patterns. Macro- and micronutrient needs are also increased but often difficult to achieve without supplements. Ergogenic aids, especially of plant origin, are very popular but are also dangerous from the point of view of doping. Antioxidant activity and the influence of some phytonutrients like beetroot could also be critically important for regeneration and for maximal oxygen consumption. Nutritional supplementation could be extremely important in many situations for obtaining the optimal fat-free mass of the athletes. The tendency for an ideal body composition could be problematic because it could have a negative influence on the energetic and regenerative points of the body. Low energetic availability and danger of RED syndrome are very common in professional sports people.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
