

Special Issue

Acute Kidney Events in Intensive Care

Message from the Guest Editor

The aim of this Issue is to report the most recent data on renal function and its possible deterioration in critically ill patients. The kidney is a central organ in the management of intensive care patients, and thus deserves a great deal of attention, with the sole aim of improving the prognosis of these patients. In patients admitted to intensive care units (ICUs), adverse renal events frequently occur, significantly impacting mortality and morbidity. Acute kidney injury (AKI) is the most common adverse renal event. In fact, AKI occurs in almost 50% of these patients, leading not only to an increased risk of mortality, but also to deleterious systemic effects in survivors, predisposing them to cardiovascular disease and chronic kidney disease. This Special Issue's purpose is to explore the advances in acute kidney events in intensive care, focusing on perspectives of interest from both a clinical perspective and for the scientific community.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
