Multiple Endocrine Neoplasia: Basic and Clinical Findings

Message from the Guest Editor

Multiple endocrine neoplasia is an inherited gene aberration affecting the worldwide population. It is responsible for the development of neoplastic lesions of the human endocrine system. Up to now, the role exerted by the genes MEN1 and MEN2 is still under investigation, and their mechanism of action is not fully understood yet. We are in urgent need to focus on their activity in order to acquire knowledge on their aberrant implication in tumorigenesis, and further clinical aspects need to be highlighted. I strongly encourage submission regarding basic and clinical science findings about multiple endocrine neoplasia and its possible implication in cancer development and cellular homeostasis.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
