Structure, Dynamics, and Function of Protein Tunnels and Channels

Message from the Guest Editors

The primary goal of this Special Issue of *Life* is to gather original research articles on exciting discoveries of novel transport paths in proteins, functional characterization of transport paths, engineering of such pathways, and their perturbation by the environment (ligands, drugs, solvents, membrane, etc.) investigated by experimental and/or computational methods; as well as studies on the development and benchmarking of methods for identification and analyses of transport pathways. Critical reviews focused on specific and timely topics relevant to molecular transport in proteins are also highly welcomed.
