

Special Issue

Telomere and Heterochromatin Biology in Ageing and Disease

Message from the Guest Editor

Ageing can be described as the accumulation of changes experienced over the life of an organism. It is thought that the accumulation of senescent cells in tissues leads to organ deterioration and ultimately to age-related pathologies such as atherosclerosis, arthritis, osteoporosis, type 2 diabetes, and cancer, amongst others. In recent years, the understanding of the cellular and molecular mechanisms leading to senescence has significantly progressed. Many players are interconnected in this process. Among them, telomeres, sometimes referred to as the biological clock of the cells, have been paid special attention due to their role in modulating the life span of the cells. More recently, heterochromatin was found to play significant roles in the nuclear organization and gene expression changes occurring in this biological process. This Special Issue aims to gather novel findings on telomere and heterochromatin biology, ranging from DNA replication, recombination, and repair to nuclear organization and gene expression, with a special focus on ageing and age-related pathologies.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
