Bryophyte Responses to Climate Changes

Message from the Guest Editors

Bryophytes (mosses, liverworts, and hornworts) are the earliest group of land plants on the planet. Bryophytes have crucial roles in regulating water storage and flow, stabilizing the soil and preventing erosion, and contributing substantially to nutrient cycles. They are also extremely sensitive to changes in the environment, being coined as ‘canaries in the coal mine.’

Consequently, the big question is whether, where, and how these species can cope with the accelerated rate of environmental changes. In this context, this Special Issue of *Life* aims to publish a collection of studies dealing with evolutionary adaptations of bryophytes incorporating ecological modelling, genomic and evolutionary parameters. Authors are invited to submit related original research articles, reviews, and communications.

Guest Editors

Dr. David Draper

Centro de Ecologia, Evolução e Alterações Ambientais (CE3C- Centre for Ecology, Evolution and Environmental Changes), University of Lisbon, 1649-004 Lisboa, Portugal

Dr. Cecília Sérgio

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
