Gravitational Microbiology Research and Applications

Message from the Guest Editors

Different microbial responses to microgravity have been observed during the first 60 years of space microbiology research. These include changes in growth dynamics, horizontal gene transfer, susceptibility or resistance to antibiotics, cell size, envelope characteristics, formation of membrane vesicles, cellular aggregation, biofilm formation, virulence, gene expression, and metabolite synthesis, to name a few. Increased access to powerful omics tools, devices to simulate certain aspects of reduced gravity environments (e.g., clinostats and rotating wall vessels), and new research platforms for reduced gravity are allowing for novel and comprehensive investigations to take place both on and off Earth. Furthermore, new space exploration programs such as Artemis will enable space microbiology research beyond lower Earth orbit (LEO) and outside Earth's Van Allen belts.

Guest Editors

Dr. Luis Zea

Dr. Sergio Santa María

Dr. Marta Cortesao

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
