Osteoarthritis Pathology and Treatment

Message from the Guest Editor

Among the over one hundred different types of arthritis conditions, osteoarthritis (OA) also known as degenerative arthritis is the most common, being a major cause of pain and disability in adult individuals. Our lack of full understanding of the basic mechanisms that initiate and sustain the disease remains a major obstacle in the search for an effective cure. The etiology of OA concerns joint injury, obesity, aging, and heredity. The investigations on the pathological processes of OA development are focused on OA symptoms, consisting of hypertrophy and apoptosis of articular chondrocytes, degradation of cartilage matrix, angiogenesis and calcification of hyaline cartilage, formation of osteophytes, degeneration of ligaments and remodeling of subchondral bone. The development of disease-modifying therapy for OA is embarrassed mainly because the onset and development of the disease involve complex molecular mechanisms. Most frequently, the disease is associated with pain complaints. The causes of pain appeared to be instability, increased pressure, hypertension and damage of sensitive structures like periosteum, ligaments and joint capsule.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
