Psoriasis: New Developments and Concepts in Pathogenesis and Treatment

Message from the Guest Editors

Psoriasis, a chronic immune mediated skin disease, is one of the most common dermatological conditions. During the last decades basic research focusing on the pathogenesis of the disease has been translated into successful therapies – thereby revolutionizing the daily management of psoriasis. Today, several aspects of psoriasis pathogenesis are clearly defined, and for most psoriasis patients long term remission is a realistic therapeutic goal. Despite this tremendous progress, however, several questions remain open concerning both fundamental pathogenetic as well as everyday practical issues about psoriasis. This special issue aims to provide a state-of-the-art overview and a glimpse into the future of the frontier research and the management psoriasis.

About the Journal

Message from the Editor-in-Chief

Life (ISSN 2075-1729) is an international, peer-reviewed open access journal that publishes scientific studies related to fundamental themes in life sciences. Some papers are published individually, while others are submitted for inclusion in special issues with guest editors. You are invited to contribute a research article, essay, or a review to be considered for publication.

Editor-in-Chief

Prof. Dr. Lluís Ribas de Pouplana

Institute for Research in Biomedicine (IRB Barcelona), The Barcelona
Institute of Science and Technology, 08028 Barcelona, Spain

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Biology) / CiteScore - Q1 (Paleontology)
