Dr. Gaudêncio Freires

Department of Mechanical Engineering, Polytechnic School of Engineering, Universidade Federal da Bahia, Salvador 40210-630, Brazil

Deadline for manuscript submissions:

closed (17 September 2022)

Message from the Guest Editors

Companies that need to adapt to the necessity or the obligation to reduce their environmental and social impacts and at the same time maintain their profitability need to face the challenge of rethinking and redesigning their chains and their business structure. Issues related to supplier evaluation considering aspects of sustainability or forms of logistical reorganization are fundamental to achieve better results.

Despite the potentials and advantages of introducing environmental sustainability to the design of supply chain and operations, there are many obstacles or barriers that make companies face huge challenges.

This Special Issue seeks to contribute to the discussion of the potentials of environmental sustainability in supply chain design and operations. Authors are cordially invited to submit original research papers, review articles, empirical studies, and case studies (for teaching and training) to this Special Issue of *Logistics*.
