Deadline for manuscript
submissions:

31 May 2024

Message from the Guest Editor

Dear Colleagues,

Bearings are one of the main sources of nonlinearity in systems formed by rotating machines, since they significantly affect their operation. This nonlinear behavior has led to the development of a wide range of techniques, both for monitoring and for maintenance, making it possible to guarantee the normal operation of a machine's bearings. In applications such as turbines and aircraft engines, the condition of these elements is paramount because a simple imperfection can cause critical problems and extremely dangerous as well as expensive results. In CNC machine tools, the progressive wear of bearings cannot be avoided and it is important to continuously monitor and diagnose in order to generate an accurate diagnosis of the condition of machinery.

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within *Scopus*, *SCIE (Web of Science)*, *Inspec*, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Mechanical*)
