Multi-Body System Dynamics: Monitoring, Simulation and Control

Guest Editor:

Prof. Dr. Kari Tammi

Department of Mechanical
Engineering, Aalto University,
Espoo, Finland

Deadline for manuscript
submissions:

closed (31 October 2018)

Message from the Guest Editor

Mechanical systems are becoming more and more connected with electric power transmission, monitoring, automation, and control systems. The multi-physical connections take place over various networks, e.g., power networks or industrial Internet. The motivation for the connection is usually in improving machine efficiency, safety, or environmental impact. The machine design becomes challenging, as mastering one discipline cannot guarantee machine behavior.

This Special Issue calls original research papers on multi-body mechanical systems connected with electric powertrain, control and/or monitoring systems. These mechatronic systems can be found in various applications, e.g., in electric or autonomous vehicles, robotics, etc. The scope of this issue is not limited to the application focus, but, rather, calls for novel contributions on the analysis of these multi-physical systems. Multi-physical analysis of multi-body systems connected with experimental results is expected in papers that will be published.

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within *Scopus*, *SCIE (Web of Science)*, *Inspec*, and other databases.

Journal Rank: JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2 (Control and Optimization)
