

## Special Issue

# Trustworthy and Intelligent Systems for Machine Health Monitoring and Predictive Maintenance

### Message from the Guest Editors

In modern industrial systems, continuous machinery health monitoring is essential for predictive maintenance. Real-time monitoring helps detect potential faults early and avoids unnecessary maintenance, ensuring optimal system performance. Condition-based maintenance relies on both diagnosis and prognosis. Diagnosis assesses machinery health using monitored signal data, while prognosis predicts remaining useful life based on operational profiles. Data-driven approaches, particularly machine learning and deep learning, have become prominent for their adaptability and scalability compared to physics-based models. However, reliably detecting early faults and forecasting conditions in a trustworthy and interpretable manner remains challenging. This Special Issue seeks contributions from researchers and practitioners on the latest advances in trustworthy data-driven health monitoring for intelligent machinery.

### Guest Editors

Dr. Tongtong Yan

Department of Civil Engineering, University of British Columbia,  
Vancouver, BC V6T 1Z4, Canada

Dr. Yaoxiang Yu

Mechanical Engineering Department, Tsinghua University, Beijing,  
China

Dr. Yankai Wang

School of Software, Tsinghua University, Beijing, China

### Deadline for manuscript submissions

30 April 2026

## About the Journal

### Message from the Editor-in-Chief

*Machines* is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided. There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

---

### Editor-in-Chief

Prof. Dr. Antonio J. Marques Cardoso  
CISE - Electromechatronic Systems Research Centre, University of  
Beira Interior, Calçada Fonte do Lameiro, P-6201-001 Covilhã, Portugal

---

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q1  
(Control and Optimization)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.9 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
