

Special Issue

Transformative Advances in Additive Manufacturing for Demanding Applications

Message from the Guest Editor

Additive manufacturing (AM) was considered a rapid prototyping tool when the first machines were developed in the 1980s. Layer-by-layer creation of the part and usability of many materials allow the creation of extremely complex structures with customized properties. Additive manufacturing has become an alternative production method for space applications, small scale production, creation of assembled products, sensing structures and many applications. The objective of this Special Issue is to collect recent studies that has been transforming additive manufacturing into a powerful production tool of extraordinary structures. Topics include but are not limited to the following research themes: additive manufacturing multi-material additive manufacturing 3D printing 4D printing 5D printing Large scale 3D printing Additive manufacturing in space similar transformative approaches

About the Journal

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Editor-in-Chief

Prof. Dr. Antonio J. Marques Cardoso
CISE–Electromechatronic Systems Research Centre, University of Beira Interior, Calçada Fonte do Lameiro, P-6201-001 Covilhã, Portugal

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q1 (Control and Optimization)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.9 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2026).
