Message from the Guest Editor

Dear Colleagues,

This Special Issue of the *Magnetochemistry* journal on “Magnetic Oxide Nanoparticles/Composites” provides an important forum for the disclosure and discussion of original contributions covering technologies for synthesis, characterization, and application of various nanostructured magnetic materials, including but not limited to magnetic oxides, magnetic nanoparticles, thin films, and composite materials. The connections between chemical, structural, and microstructural properties of the materials and magnetic properties are encouraged. The journal welcomes theoretical research, simulation, and experimental studies within the scope, in the form of reviews, original research articles, communications, and letters.

Dr. Vesna Nikolic
Guest Editor
