

## Special Issue

# New Trends in Spintronic Materials and Devices

### Message from the Guest Editors

This Special Issue of Magnetochemistry is on the theme of “New Trends in Spintronic Materials and Devices”. Spintronics is one of the major research directions that holds potential beyond the von Neumann architecture, which makes use of the spin and magnetic moment of the electron to create high-performance materials and useful sensors and memory and logic devices with properties not possible with charge-based devices. This Special Issue covers the theoretical simulation, preparation, and physical understanding of spintronic materials; the design and physical mechanism of spintronic devices including sensors, isolators, and memory devices; as well as their applications. We hope this Special Issue will initiate and promote wider academic communication in advanced spintronic materials and devices as well as their relevant frontier research areas.

Spin-orbit torque (SOT) is an emerging technology that enables the efficient manipulation of spintronic devices. This Special Issue reviews the current status and future perspectives of the field of spin-orbit torque.

## About the Journal

### Message from the Editor-in-Chief

*Magnetochemistry* constitutes a multidisciplinary field where chemists and physicists not only study magnetic properties but also design and synthesize chemical compounds with desired magnetic properties.

*Magnetochemistry* is inviting contributions in any field related with this area, such as theoretical models, crystal engineering, molecular magnetism, SMM, SIM, SCM, SCO, magnetic nanostructures, magnetic MOFs, magnetic recording, qubits, magneto-caloric materials, etc. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Electronic, Optical and Magnetic Materials)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
