Special Issue

Magnetic Coordination Polymers

Message from the Guest Editor

Coordination polymers with various dimensionalities are of high interest in molecular magnetism. One-dimensional coordination polymers may behave as single-chain magnets or chains of single-molecule magnets; two-dimensional coordination polymers can also exhibit slow relaxation of the magnetization phenomena (layers of single-chain magnets); three-dimensional coordination polymers have been intensively investigated in the search for molecule-based magnets and are very topical, particularly, when magnetic properties are combined with other properties (porosity, luminescence, sensing of various molecules with modulation of the magnetic behavior). Numerous spin-crossover materials are coordination polymers. All these goals stimulate the development of new synthetic approaches leading to a very rich structural variety of homo- and hetero-metallic networks. Consequently, we consider that a Special Issue dedicated to coordination polymers and their relevance in molecular magnetism is welcome.

- Magnetic coordination polymers
- single-chain magnets
- single-molecule magnets
- 3D molecule-based magnets
- spin-crossover complexes.

About the Journal

Message from the Editor-in-Chief

Magnetochemistry constitutes a multidisciplinary field where chemists and physicists not only study magnetic properties but also design and synthesize chemical compounds with desired magnetic properties. *Magnetochemistry* is inviting contributions in any field related with this area, such as theoretical models, crystal engineering, molecular magnetism, SMM, SIM, SCM, SCO, magnetic nanostructures, magnetic MOFs, magnetic recording, qubits, magneto-caloric materials, etc. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Electronic, Optical and Magnetic Materials)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
