

Special Issue

Application of Magnetic Materials on Dental Diseases

Message from the Guest Editors

Magnetic materials, such as magnetic nanoparticles, exhibit magnetic responsiveness, biocompatibility, and the ability to interact with magnetic fields, making them versatile tools for addressing dental conditions. The application of magnetic materials in dental clinic is a fascinating and innovative field that holds promise for various diagnostic and therapeutic purposes. The aim of this collection is to capture the latest research or reviews in the application of magnetic materials in dental diseases. This Special Issue invites colleagues to submit original research articles or reviews including, though not limited to, the following topics of focused interest:

- Diagnostic imaging
- Biofilm management
- Targeted drug delivery
- Bone regeneration
- Dental implants
- Orthodontics

Guest Editors

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García

Department of Inorganic Chemistry, Faculty of Chemistry, University of Valencia, C/Dr. Moliner 50, 46100 Burjassot, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Electronic, Optical and Magnetic Materials)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
