## Special Issue

# Reviews on Slow-Relaxation Molecules

## Message from the Guest Editors

The discovery of the first Single Molecule Magnet and the first Single Chain Magnet, making the investigation of slow relaxation of the magnetization phenomena became a field of intensive interdisciplinary research. Beyond their relevance in Physics and Chemistry, one expects spectacular applications in quantum computing and high-density information storage from these molecules. In the last twenty years or so, a huge number of mono- and oligo-nuclear complexes, 1D coordination polymers, homo- and hetero-spin systems have been synthesized and the investigation of their dynamic magnetic properties revealed the determinants influencing the relaxation phenomena. The subtle factors influencing the magnetic anisotropy are more and better understood. This understanding further serves as a guide for the design of new, and higher performant SMMs and SCMs. An important step towards applications was achieved by organizing SMMs on surfaces.

We think that a collection of review articles presenting the state-of-the-art in this exciting field will be useful for researchers as well as for students.

## **About the Journal**

## Message from the Editor-in-Chief

Magnetochemistry constitutes a multidisciplinary field where chemists and physicists not only study magnetic properties but also design and synthesize chemical compounds with desired magnetic properties.

Magnetochemistry is inviting contributions in any field related with this area, such as theoretical models, crystal engineering, molecular magnetism, SMM, SIM, SCM, SCO, magnetic nanostructures, magnetic MOFs, magnetic recording, qubits, magneto-caloric materials, etc. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

#### Editor-in-Chief

Prof. Dr. Carlos J. Gómez García

Department of Inorganic Chemistry, Faculty of Chemistry, University of Valencia, C/Dr. Moliner 50, 46100 Burjasot, Spain

### **Author Benefits**

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

#### **Journal Rank:**

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Electronic, Optical and Magnetic Materials)

### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
