Special Issue

Symmetry and Geometry, Key Parameters in 3d and 4f Molecular Magnetism

Message from the Guest Editors

In molecular magnetism, 3d and/or 4f complexes are usually associated with a specific geometry, which is then linked to a particular symmetry.

Almost 10 years later, Ishikawa et al. presented the existence of coordination compounds based on a single 4f ion, which also present slow relaxation of magnetization. The slow magnetic relaxation is due to the anisotropy of the 4f orbitals, and the relaxation mechanisms are defined by thermal processes (Orbach, Raman, and direct) and by quantum phenomena (quantum tunnelling of magnetization (QTM)), which is thermally independent. For these types of complexes, geometry (and, therefore, symmetry) plays a key role in the design of high performance LnIII-SIMs, since changes in the geometry of LnIII ions will modify their crystal field parameters and thereby influence the dynamic magnetic properties.

This Special Issue of Magnetochemistry aims to publish a collection of research contributions highlighting the recent achievements in the relation of geometry and symmetry with the magnetic properties of 3d and/or 4f complexes.

About the Journal

Message from the Editor-in-Chief

Magnetochemistry constitutes a multidisciplinary field where chemists and physicists not only study magnetic properties but also design and synthesize chemical compounds with desired magnetic properties.

Magnetochemistry is inviting contributions in any field related with this area, such as theoretical models, crystal engineering, molecular magnetism, SMM, SIM, SCM, SCO, magnetic nanostructures, magnetic MOFs, magnetic recording, qubits, magneto-caloric materials, etc. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief

Prof. Dr. Carlos J. Gómez García

Department of Inorganic Chemistry, Faculty of Chemistry, University of Valencia, C/Dr. Moliner 50, 46100 Burjasot, Spain

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Chemistry, Inorganic and Nuclear) / CiteScore - Q2 (Electronic, Optical and Magnetic Materials)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
