### **Message from the Guest Editors**

In this Special Issue of Marine Drugs, we would like to cover different recent aspects related to naturally occurring halogenated compounds such as their detection in marine environments, their structural characterization, their biosynthesis and bioengineering, their ecological roles as well as their bioactivity. Consequently, we cordially welcome colleagues to contribute to this Special Issue with reviews, original papers, or short communications.

## Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.
