Message from the Guest Editor

Dear Colleagues,

Coronaviruses are a large group of enveloped viruses with a positive-sense single-stranded RNA genome and a nucleocapsid of helical symmetry. This group includes various human respiratory diseases: some common colds, Middle East Respiratory Syndrome (MERS), Severe Acute Respiratory Syndrome (SARS) and the recently appeared COVID-19. *Marine Drugs*, as the leading journal in reporting marine natural products and their biological/pharmacological/therapeutical applications, would like to provide a publication platform on this topic. Thus, scientists in the marine field are invited to present original and advanced research outcomes about marine natural products with potential efficacy against coronavirus. We welcome both research articles and comprehensive reviews.

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Author Benefits

Open Access:—free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed by the [Science Citation Index Expanded](#) (Web of Science), **MEDLINE** (PubMed), Embase, Scopus, [MarinLit](#) and other databases. Full-text available in [PubMed Central](#).

CiteScore (2019 Scopus data): **5.1**, which equals rank 41/143 in 'Drug Discovery'.
