

Special Issue

Collagen and Chitin from Marine Resources and Their Interdisciplinary Applications

Message from the Guest Editor

Marine collagen and chitin have great potential applications in drug discovery, drug delivery, wound healing, tissue engineering, antiaging, agriculture, and environmental fields. These two biopolymers also exhibit similar hierarchical structural organizations. After cellulose, chitin is the second most important natural polymer in the world, and has been identified in bacteria, fungi, plants, and marine invertebrates. Chitin can also be enzymatically deacetylated to chitosan, a more flexible and soluble biopolymer. As mentioned above, it has many applications, including in the biomedical, environmental, and agricultural sectors. Similarly, nature is a source of massive quantities of collagen, especially in marine organisms. Collagen is the main fibrous structural protein in the extracellular matrix and connective tissue of animals. It contributes greatly to biotechnology products and medical applications. As a part of this Special Issue, I invite you to submit recent innovations in these two biopolymers, including original works, reviews, short communications, and innovations in biological sources and their promising applications.

About the Journal

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, MarinLit, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmacology, Toxicology and Pharmaceutics (miscellaneous))
