

Special Issue

Marine Natural Products - Advances in Separation, Characterisation and Chemical Profiling Methodologies

Message from the Guest Editor

Dear Colleagues The search for bioactive secondary metabolites from marine organisms continues to be an active area of research in the drug discovery area. There is an ever demanding need to employ various chemical profiling strategies to accelerate the process of new compound discovery. This special issue of *Marine Drugs* will highlight advances in extraction, isolation, purification and dereplication methodologies which can expedite the search for bioactive marine natural products. Dr. Sylvia Urban

About the Journal

Message from the Editor-in-Chief

During the past few decades there has been an ever increasing number of novel compounds discovered in the marine environment. This is exemplified by the robust preclinical and clinical pipeline that currently exists for marine natural products. *Marine Drugs* is inviting contributions on new advances in marine biotechnology, pharmacology, chemical ecology, synthetic biology, and genomics approaches related to the discovery of therapeutically relevant marine natural products. Our goal is to share your contribution in a timely fashion and in a manner that will be valued by the scientific community.

Editor-in-Chief
