Message from the Guest Editor

The advent of 3D printing brings about the possibilities of designing functional materials based on their structures as opposed to their chemistry. Specifically, these materials are cellular and designed with the introduction of architectured pores. A new class of porous material, known as lattice structure, manifests from this. They often display properties not commonly found in traditional bulk materials, such as being lightweight, with a usually low/high specific stiffness and strength, deforming with a stress plateau region, having a high specific surface area, with unique flow properties, and with meta-mechanical behaviors. They are widely adopted as energy-absorbers, artificial bone implants, electrochemistry, membranes, filters, and acoustic metamaterials.

This Special Issue welcomes all articles related to the 3D printing of lattice structures, including to but not limited to their design, materials processing, applications and performance, and mechanisms. This Special Issue also aims to help to advance the scientific and technical understandings of 3D-printed functional lattice structures.

Materials (ISSN 1996-1944) was launched in 2008. The
journal covers twenty-five comprehensive topics:
biomaterials, energy materials, advanced composites,
advanced materials characterization, porous materials,
manufacturing processes and systems, advanced
nanomaterials and nanotechnology, smart materials, thin
films and interfaces, catalytic materials, carbon materials,
materials chemistry, materials physics, optics and
photonicics, corrosion, construction and building materials,
materials simulation and design, electronic materials,
advanced and functional ceramics and glasses, metals and
alloys, soft matter, polymeric materials, quantum
materials, mechanics of materials, green materials,
general. Materials provides a unique opportunity to
contribute high quality articles and to take advantage of its
large readership.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or
their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed,
PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and
other databases.
Journal Rank: JCR - Q2 (Metallurgy & Metallurgical Engineering) / CiteScore - Q2
(Condensed Matter Physics)
