Message from the Guest Editors

This Special Issue refers to thin polycrystalline diamond layers that are produced mainly by chemical vapor deposition. Diamonds show a coincidence of important properties, including, e.g., hardness, Young's modulus, wide range of optical radiation transmission (from ultraviolet to far infrared), large thermal conductivity, and the possibility of electrical conductivity tailoring by doping of the lattice. Although thin diamond layers and doped diamond layers were developed several decades ago, they have become more and more popular in numerous applications in recent years, including high frequency and high power electronics, photonics, photovoltaics, electrochemistry, sensors, microelectromechanical systems (MEMS), tribological coatings, and in heat-dissipating layers. This stimulates the search for novel diamond structures, as well as the development of methods for their design, manufacturing, and diagnostics. Therefore, the subject matter of the issue will cover all issues related to the synthesis and applications of the thin diamond layers

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty comprehensive topics: biomaterials, energy materials, advanced composites, structure analysis and characterization, porous materials, manufacturing processes and systems, advanced nanomaterials, smart materials, thin films and interfaces, catalytic materials and carbon materials, materials chemistry, materials physics, optics and photonics, corrosion and materials degradation, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics, metals and alloys, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [Ei Compendex](#), [CaPlus / SciFinder](#), [Inspec](#), [Astrophysics Data System](#), and many other databases.

Journal Rank: [JCR - Q1 \(Metallurgy & Metallurgical Engineering\)](#) / [CiteScore - Q2 \(Condensed Matter Physics\)](#)
