Environmentally-Induced Failures of Electronic Grade Alloys and Coatings

Guest Editor

Prof. Dr. Balázs Illés

Department of Electronics Technology, Budapest University of Technology and Economics, Budapest, Hungary

Deadline for manuscript submissions:

closed (31 December 2020)

Message from the Guest Editor

Electronic-grade alloys are used in numerous electronic devices and systems. Electronic systems are becoming more important in our everyday lives. Consequently, electronic-grade alloys should exhibit excellent mechanical, electrical, thermal, and reliability properties. This initiates the continuous development and preparation of new alloys via the use of novel techniques.

In many fields, electronic devices need to operate in harsh environments, so not only the quality but the long-term reliability of the applied alloys is also critical. There is a strong need to investigate the environmentally induced failure mechanisms in these alloys.

This Special Issue is dedicated to disseminating the recent advancements and latest results in this rapidly evolving interdisciplinary research field.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and systems. nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
