Deadline for manuscript  
submissions:

**closed (30 November 2021)**

### Message from the Guest Editor

Polymers and polymer composites are often treated by gaseous plasma to obtain the desired surface finish, such as surface functionalization, nanostructuring, and selective etching (preferential removal of one component from the surface of a polymer composite). Although the technique has been used on an industrial scale for decades, the scientific background of the interaction between reactive gaseous species and polymer materials is still unclear. In particular, there is a lack of reliable information on the surface finish versus the plasma parameters. Furthermore, the evolution of surface properties of complex polymers and block and graft copolymers upon plasma treatment has rarely been reported. The plasma treatment often causes unwanted effects, such as modification of subsurface film, formation of loosely bonded molecular fragments on the polymer surface, and aging—spontaneous modification of surface properties of polymers and polymer composites that have been exposed to gaseous plasma.

It is my pleasure to invite you to submit a manuscript for this Special Issue. Full papers, communications, and reviews are all welcome.

an Open Access Journal by MDPI

## Editor-in-Chief

### Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

## Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
