Deadline for manuscript submissions: closed (31 December 2020)

Message from the Guest Editor

Dear Colleagues,

Iron oxides can be found in many polymorphic forms that different magnetic characteristics, catalytic exhibit activities, biocompatibilities, and other multifunctional properties. To better understand the interplay between nanoparticles' crystallography and their functional properties, novel chemical or plasma chemical methods for the synthesis of rare forms of iron oxides (beta, epsilon, required. The zeta phase) are nanotoxicity, biocompatibility, and targeted surface functionalization of iron oxide nanoparticles need to be investigated in order to use these nanoparticles in the fields of medicine, catalysis, environmental applications, and multifunctional composite materials.

The objective of this Special Issue is to provide a comprehensive overview of novel approaches to the synthesis, the characterization, and applications of iron oxide nanoparticles, with a focus on: novel techniques for the synthesis of rare iron oxides; plasma synthesis of iron oxides; advanced surface functionalization of iron oxide nanoparticles; environmentally friendly applications of iron oxides; and the role and utilization of iron oxides in the exploration of Mars.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The iournal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites. advanced materials characterization, porous materials, manufacturing processes and svstems. advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials. materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
