Message from the Guest Editor

Ceramic–metal composites (cermets) are materials formed by at least a hard and a tough metallic binder phase, designed to achieve specific properties for particular applications when it is impossible to obtain them with monophasic materials.

Particularly, for the machining industry, the cermet cutting tools based on WC–Co (usually called hard metal) are widely employed due to their exceptional toughness and damage tolerance under cyclic loadings. However, they fail when it comes to the most demanding applications. Alternative to them are cermets based on TiC and Ti(C,N), with high wear resistance, chemical stability, and mechanical strength at high temperature.

Therefore, this Special Issue is focused on contributions related to experimental and theoretical studies based on the design, production technologies, development, processing, synthesis, and characterization of cermets, with new clear progress in their microstructure and/or properties that increase their potential role as materials to be successfully applied for high-speed machining or similar applications. In addition, contributions focused on other different cermets would also be accepted.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty comprehensive topics: biomaterials, energy materials, advanced composites, structure analysis and characterization, porous materials, manufacturing processes and systems, advanced nanomaterials, smart materials, thin films and interfaces, catalytic materials and carbon materials, materials chemistry, materials physics, optics and photonics, corrosion and materials degradation, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics, metals and alloys, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Ei Compendex](#), [PubMed](#), [PMC](#), [CaPlus / SciFinder](#), [Inspec](#), [Astrophysics Data System](#), and many other databases.

Journal Rank: [JCR - Q2 \(Materials Science, Multidisciplinary\)](#) / [2020 CiteScore - Q2 \(Condensed Matter Physics\)](#)
